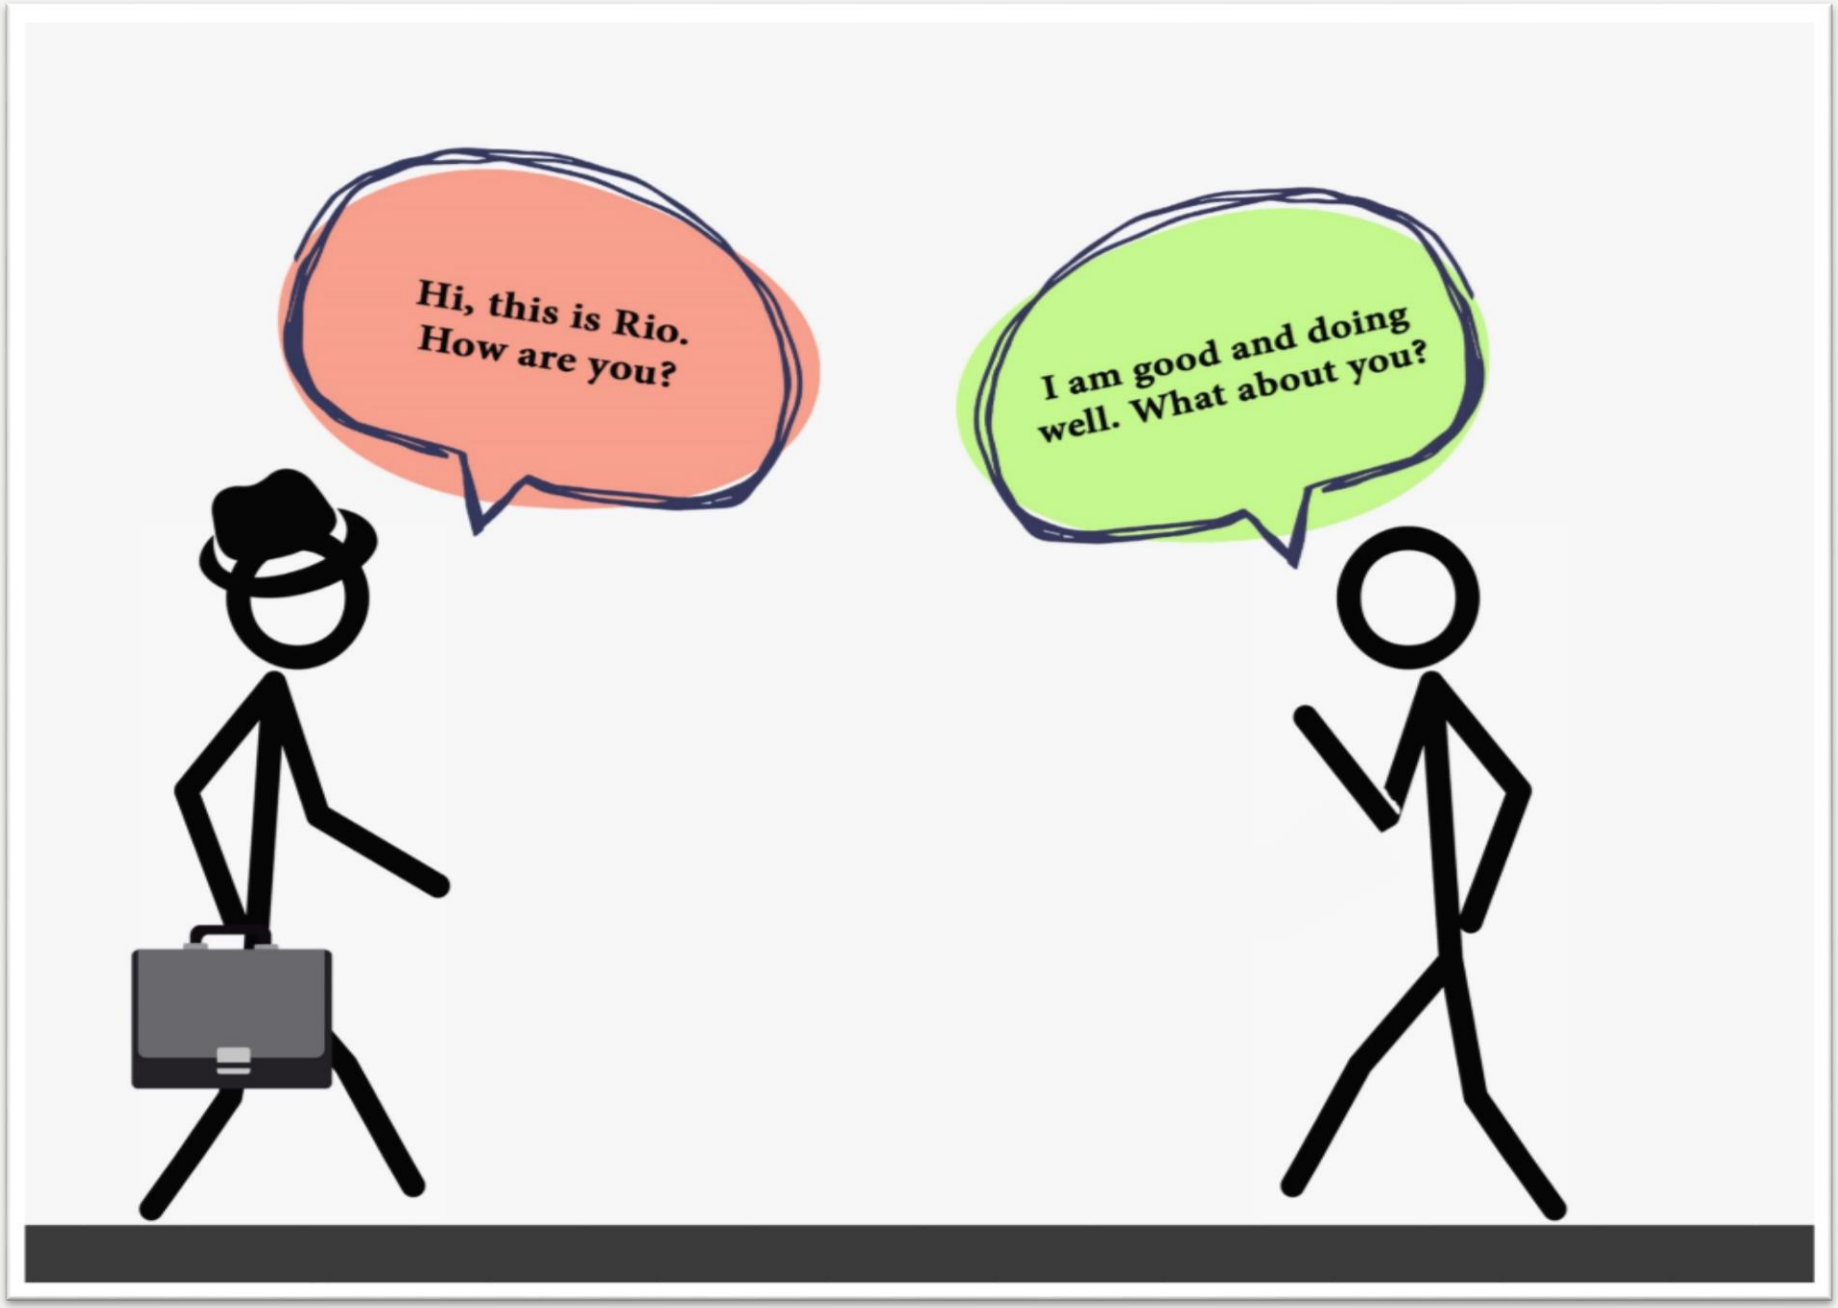
STORY FOR JOB SEEKERS

COMET E-LEARNING PLATFORM

Two college friends Rio & Srini are meeting after a year of completing their graduation together. Let's see the reality of their conversation.



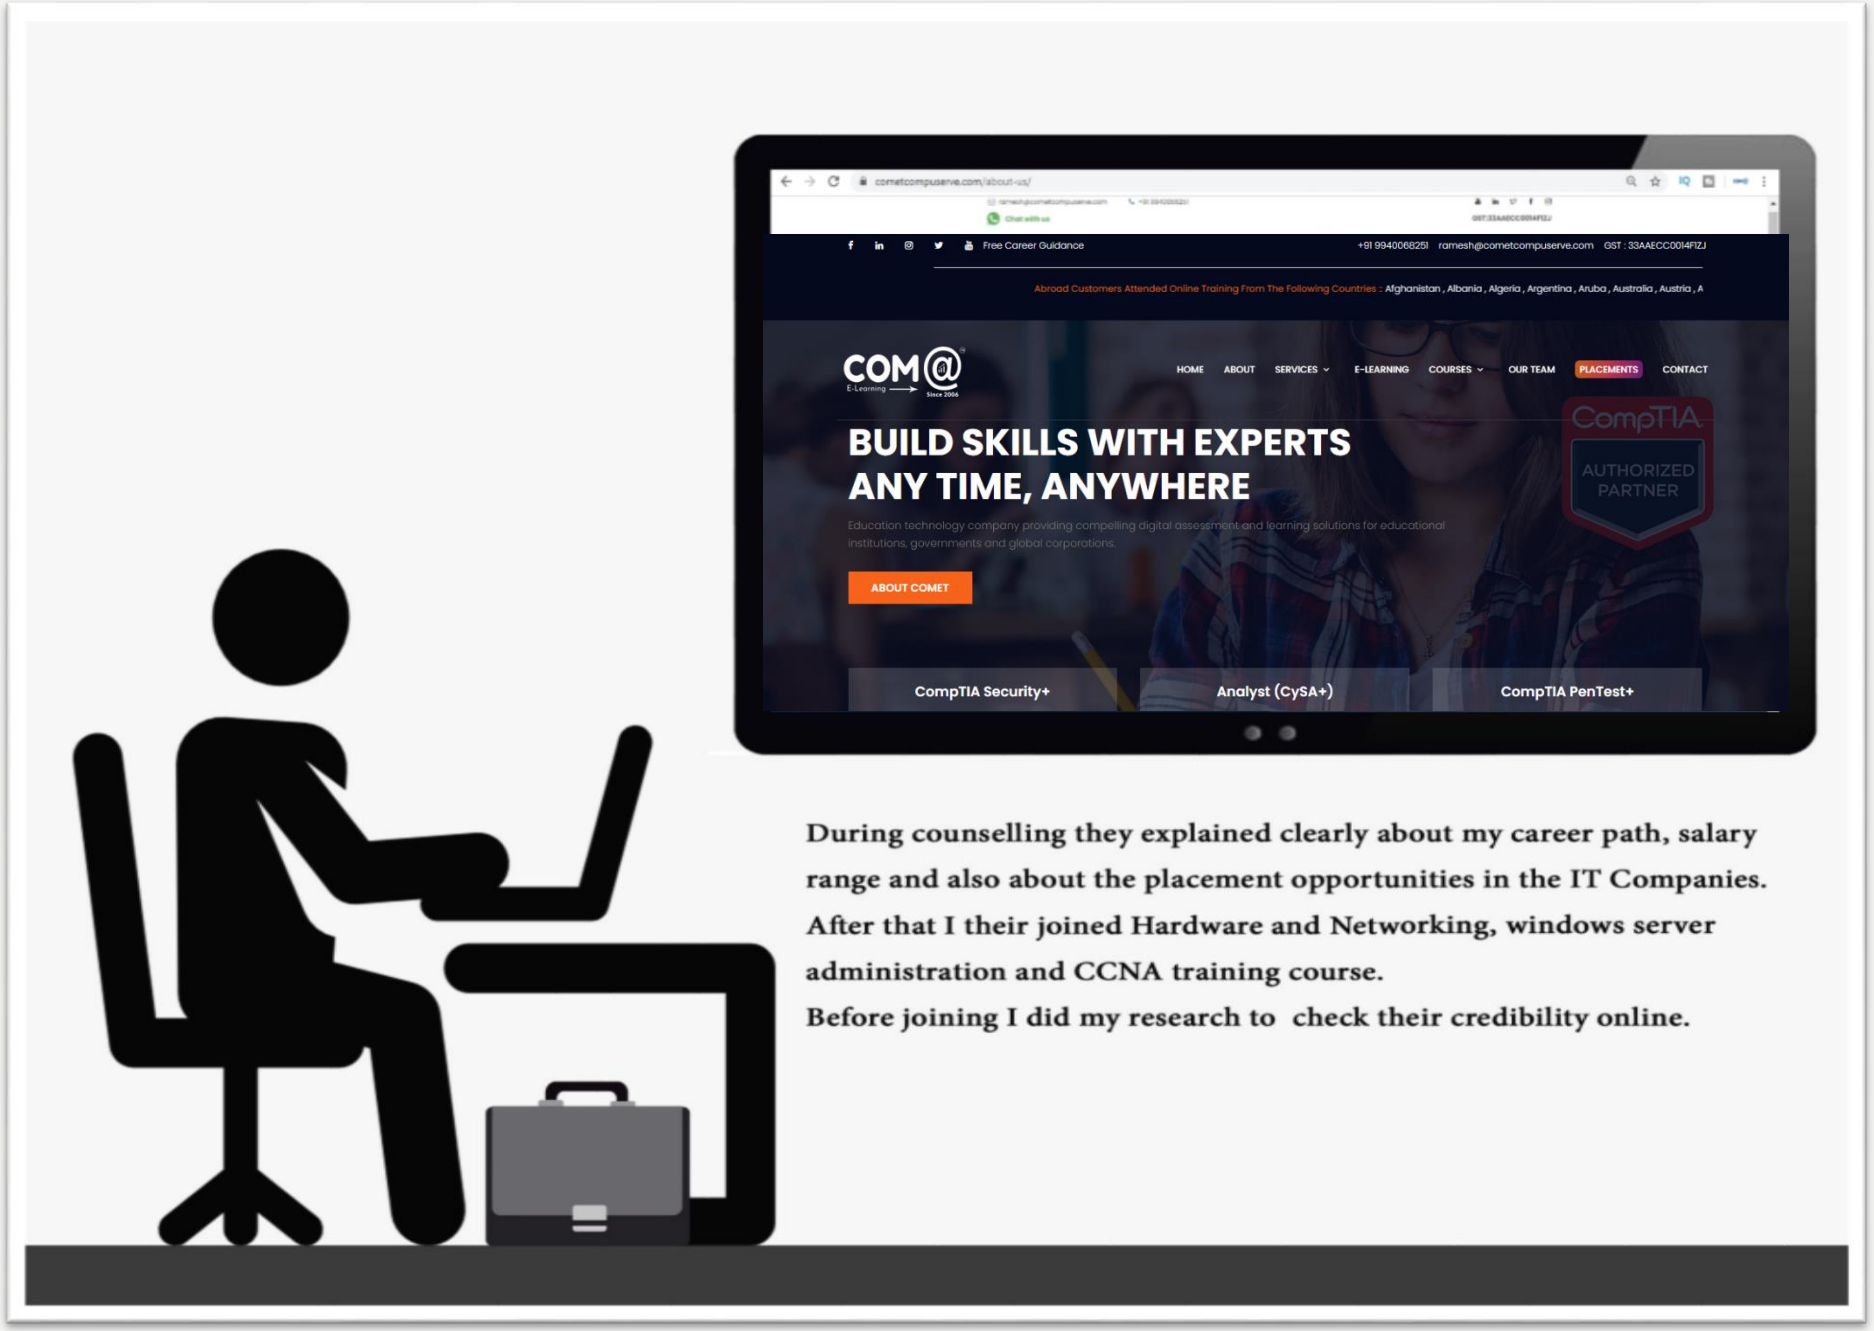
Hi, this is Rio.
How are you?
I am good and doing well. What about you?

I am also fine.
How are your family members?
They all are fine.

Good. So, what are you doing now? Are you working?
No Rio, I have been searching for a job for the last six months. What about you, Rio?

I am currently working as a Desktop support Engineer in a MNC company.
Excellent! Rio. What is your salary and how you got this job?

My salary is around 15k.
Upon a friend's reference I attended
counselling sessions at
COMET Compuserve Pvt Ltd for
career guidance and placement.



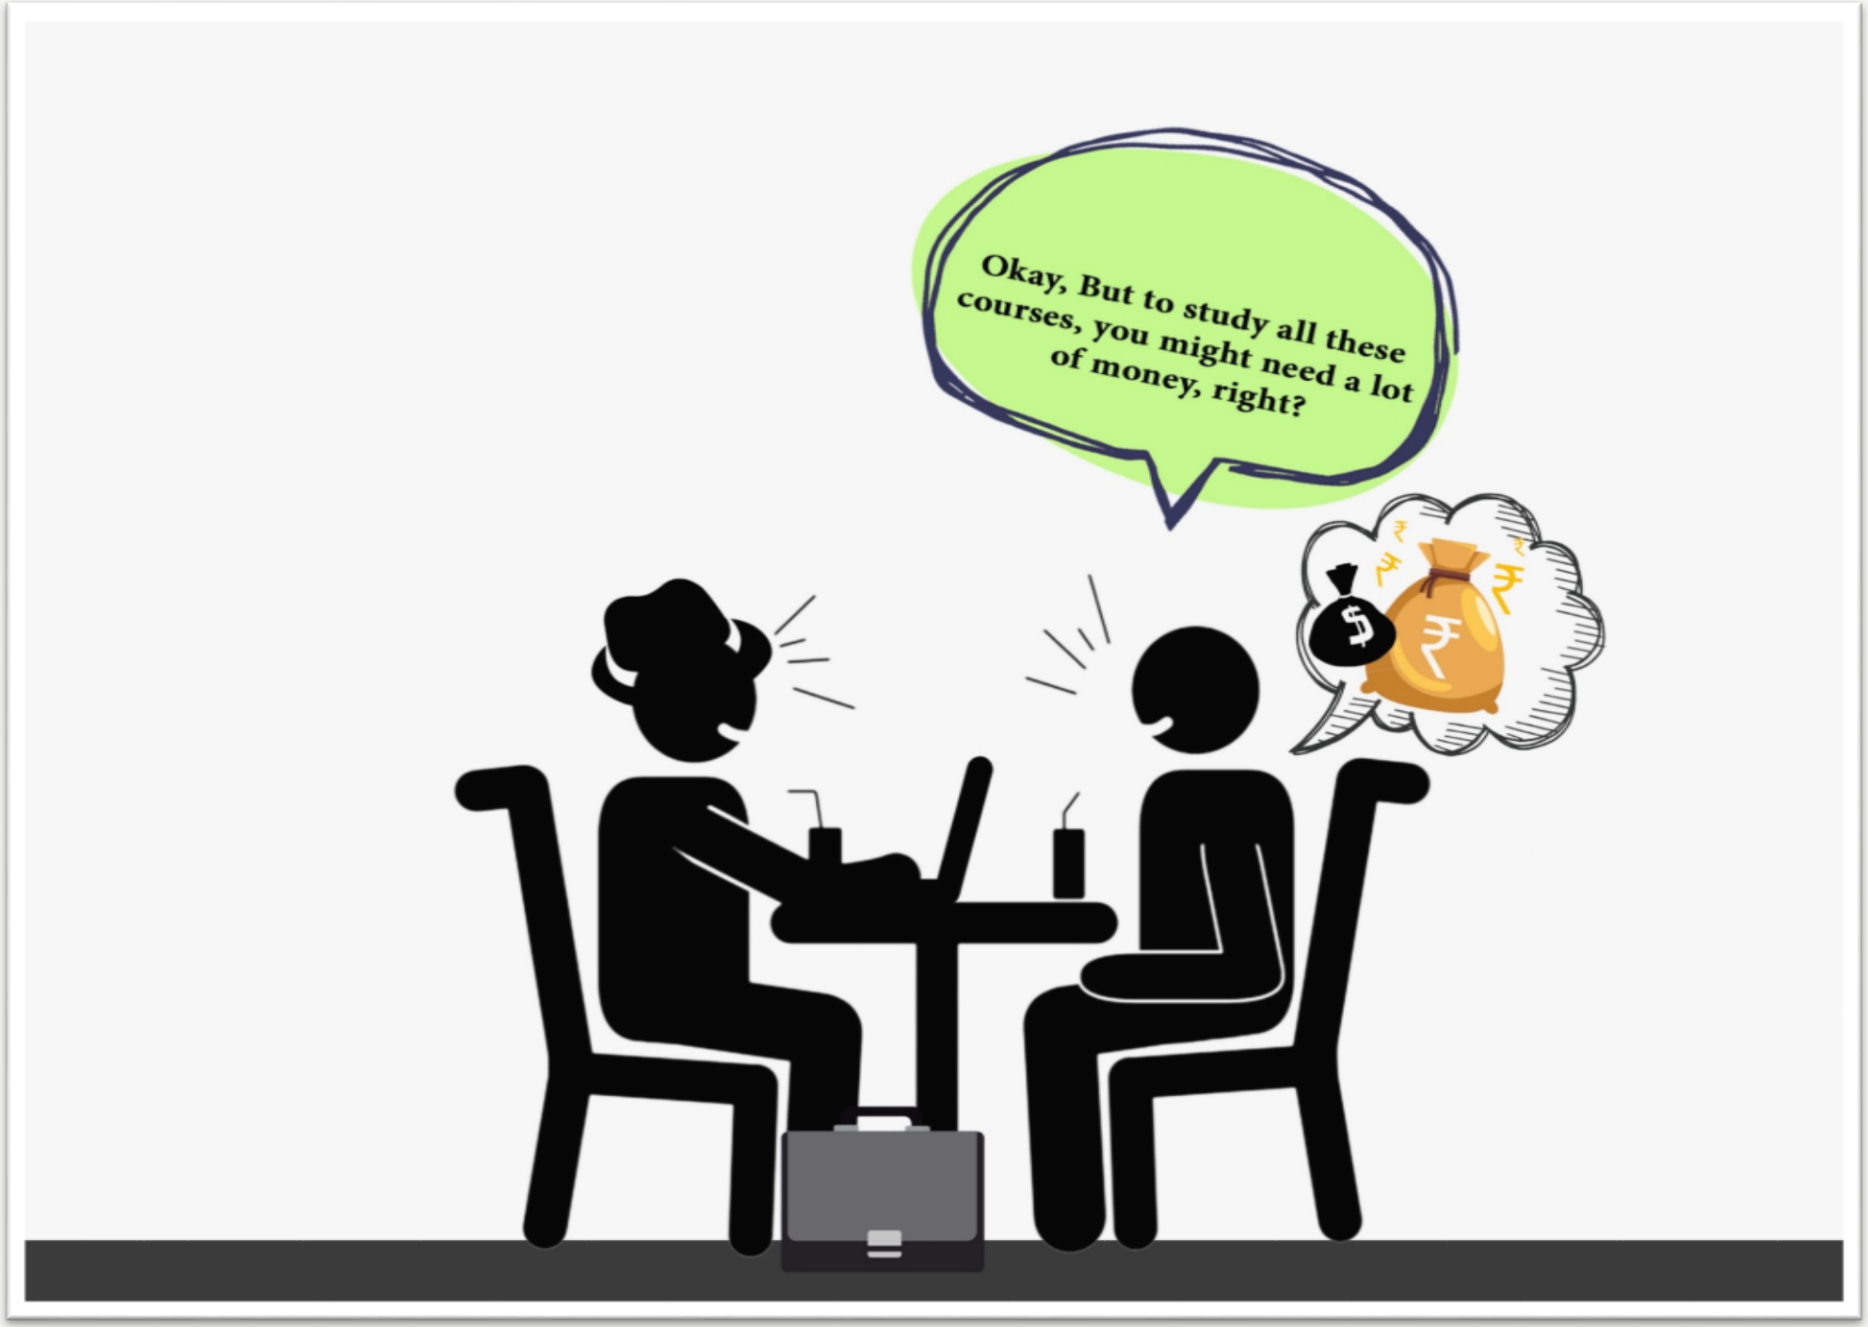
During counselling they explained clearly about my career path, salary range and also about the placement opportunities in the IT Companies. After that I their joined Hardware and Networking, windows server administration and CCNA training course.

Before joining I did my research to check their credibility online.

One good news about Comet!

COMET has real time experienced friendly and efficiently skilled instructors. They provided the best career counselling and career guidance program which guided me on the right path to build and shine in my career. I followed their guidance to start my career from Computer Hardware Networking & Operating System, Windows server Administration and CCNA Networking.

Eventually, after getting placed I continued to upgrade my skill in Virtualization, Server Hardware, Cloud and Information Security domains. Now I am extremely confident that in another couple of years, I will achieve my goal to draw a minimum salary of around 40k to 60k.



Okay, But to study all these courses, you might need a lot of money, right?

Yes, you are correct.
I had the same thoughts before joining the course, but their counselling sessions enabled me to make the right choices.
Actually, I am not willing to invest money for any training. So, I think that it will go waste.

No my friend, please understand, you are absolutely wrong. Have you ever thought why we could not get a job straightaway finishing our graduation?

Most of the students got placed in Campus, Off-campus and by attending direct interviews. What about others example like us?

That makes me think a lot, our graduation programs do not completely enable us to stay updated with current trends in the industry. We also need to stay updated about the technical skills in addition to our education to be employable in the industry.

Although we give our best during the interviews with our college education. Majority of employers ask of what other skills you have that is required by the industry, if we have any certifications.

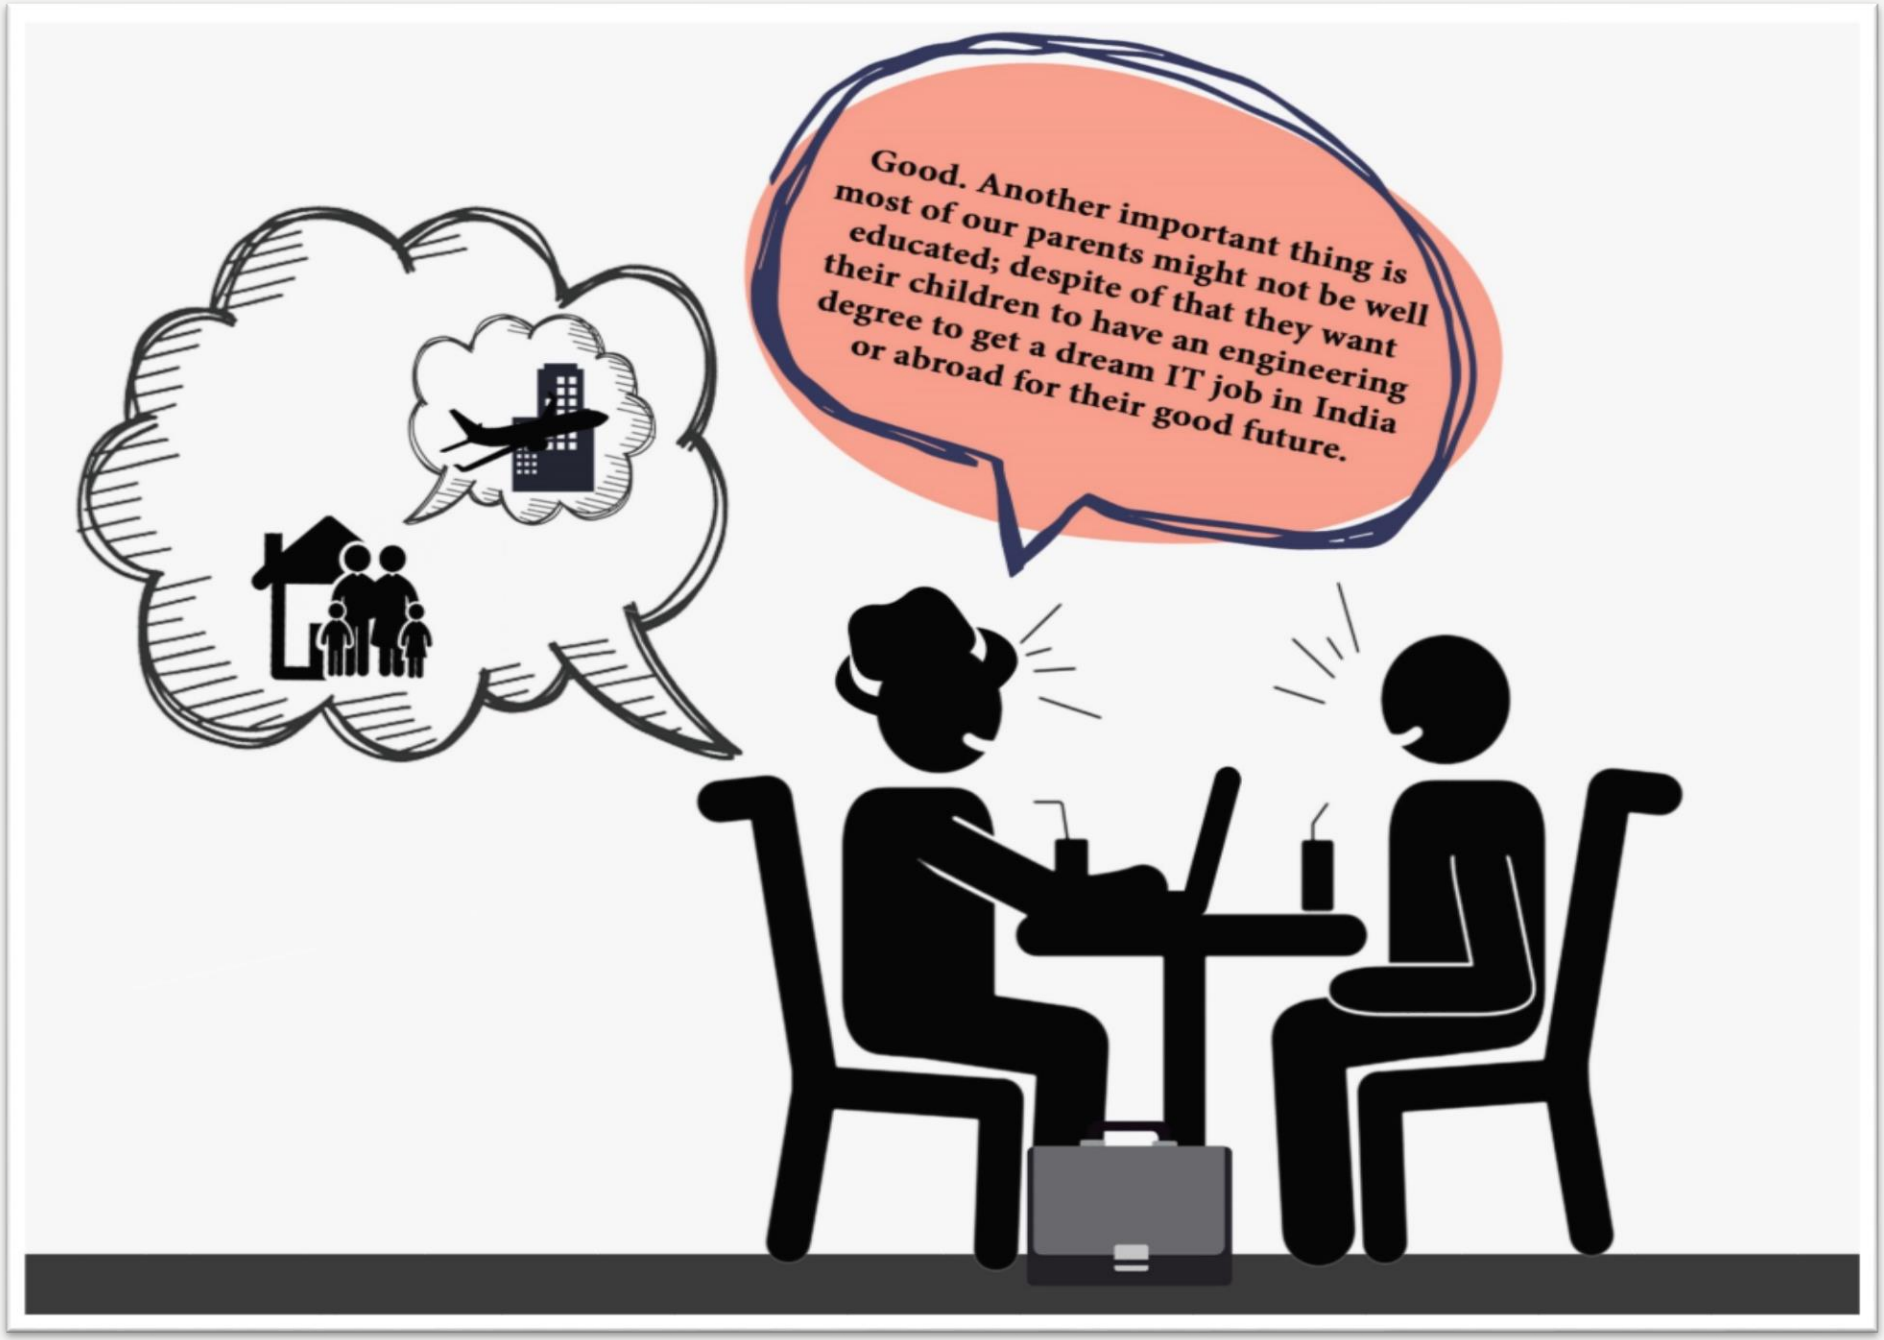
As our parents have already invested a huge amount for our graduation, we don't intend to burden them asking further investment to make ourselves employable. This caused us to lose our time, experience, and salary.

For example, if we are idle for six months, we are losing 6-months of our experience and a salary of around 90k Approx.

So, we should understand, Investment on Knowledge gives you a short time ROI (Return on Investment) You need to invest some amount of money on acquiring knowledge.

The best solution for our problem is provided by COMET. Yes, they exactly train us with the skills which meet the current IT industry requirements. COMET actually bridges the gap between the unemployed and the job opportunities. In addition to training, they provide Technical Interview Programs, Resume Screening and Personality Development programs which help students to face and clear the interview easily with more confidence than ever before. Now I think you will understand what I am trying to say, right?

Yes, I understand.
In fact, you have addressed a lot of doubts surrounding this topic

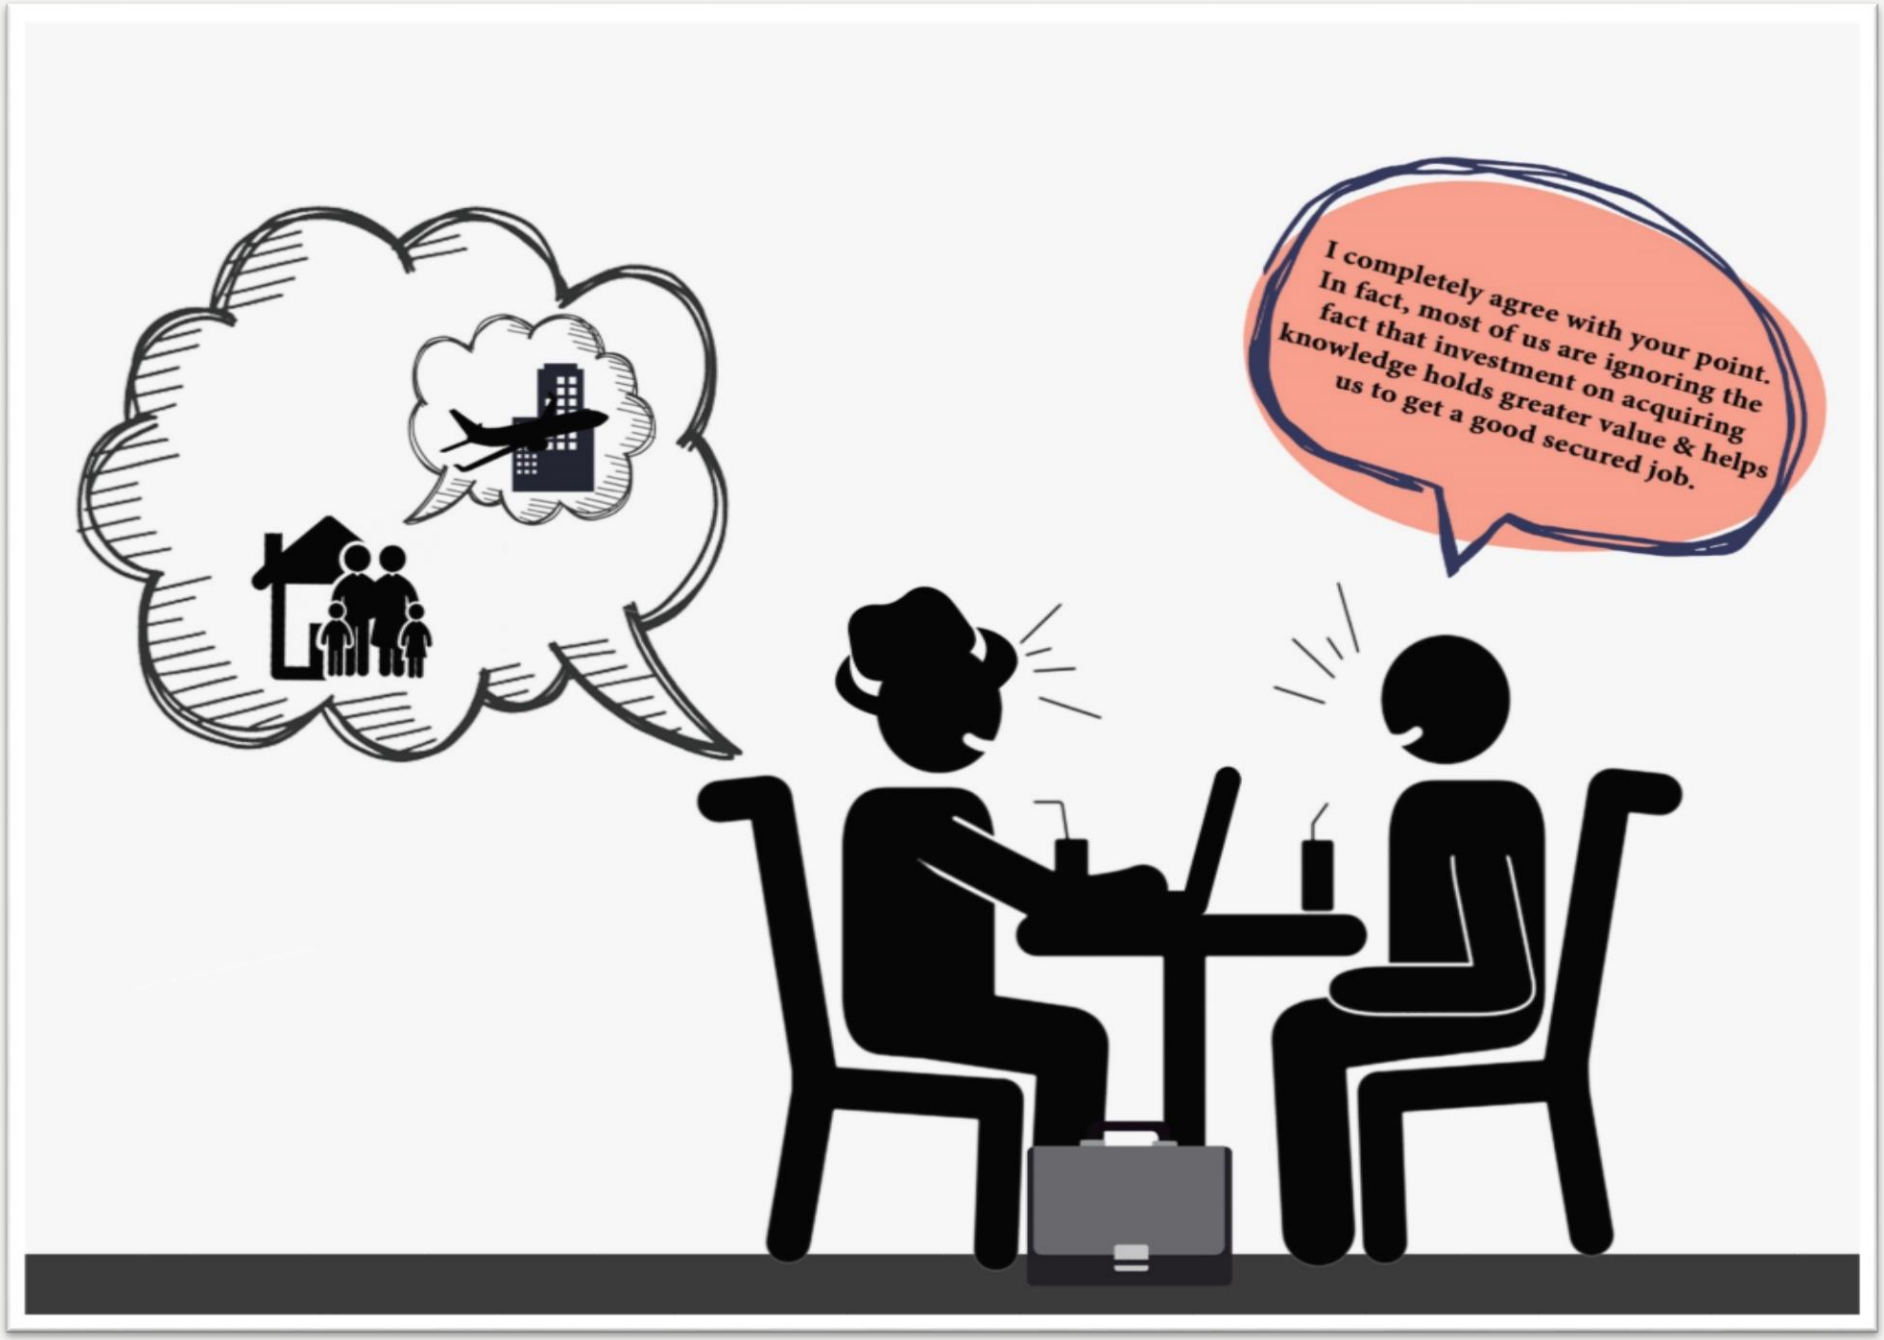


Good. Another important thing is most of our parents might not be well educated; despite of that they want their children to have an engineering degree to get a dream IT job in India or abroad for their good future.

Many are not aware of the fact that an engineering degree may not be enough to get a job at all times. We also need to upskill ourselves in the technical aspects that are essential to get an entry level job in the IT Company.

See, right from our childhood our parents are investing a lot of money on our education. But that educational knowledge alone may not fulfil everyone's dream of getting a job. So, we need to update skills to match the current Industry trends and then only we can get placed in an IT Job.

COMET not only helps you get a job, but also teaches you how to get a job for yourself to survive in today's competitive world. COMET's vision is to minimize Unemployment Problem among the Job seekers, freshers, IT graduates and professionals seeking career/domain change and also help the students to crack the campus interview.



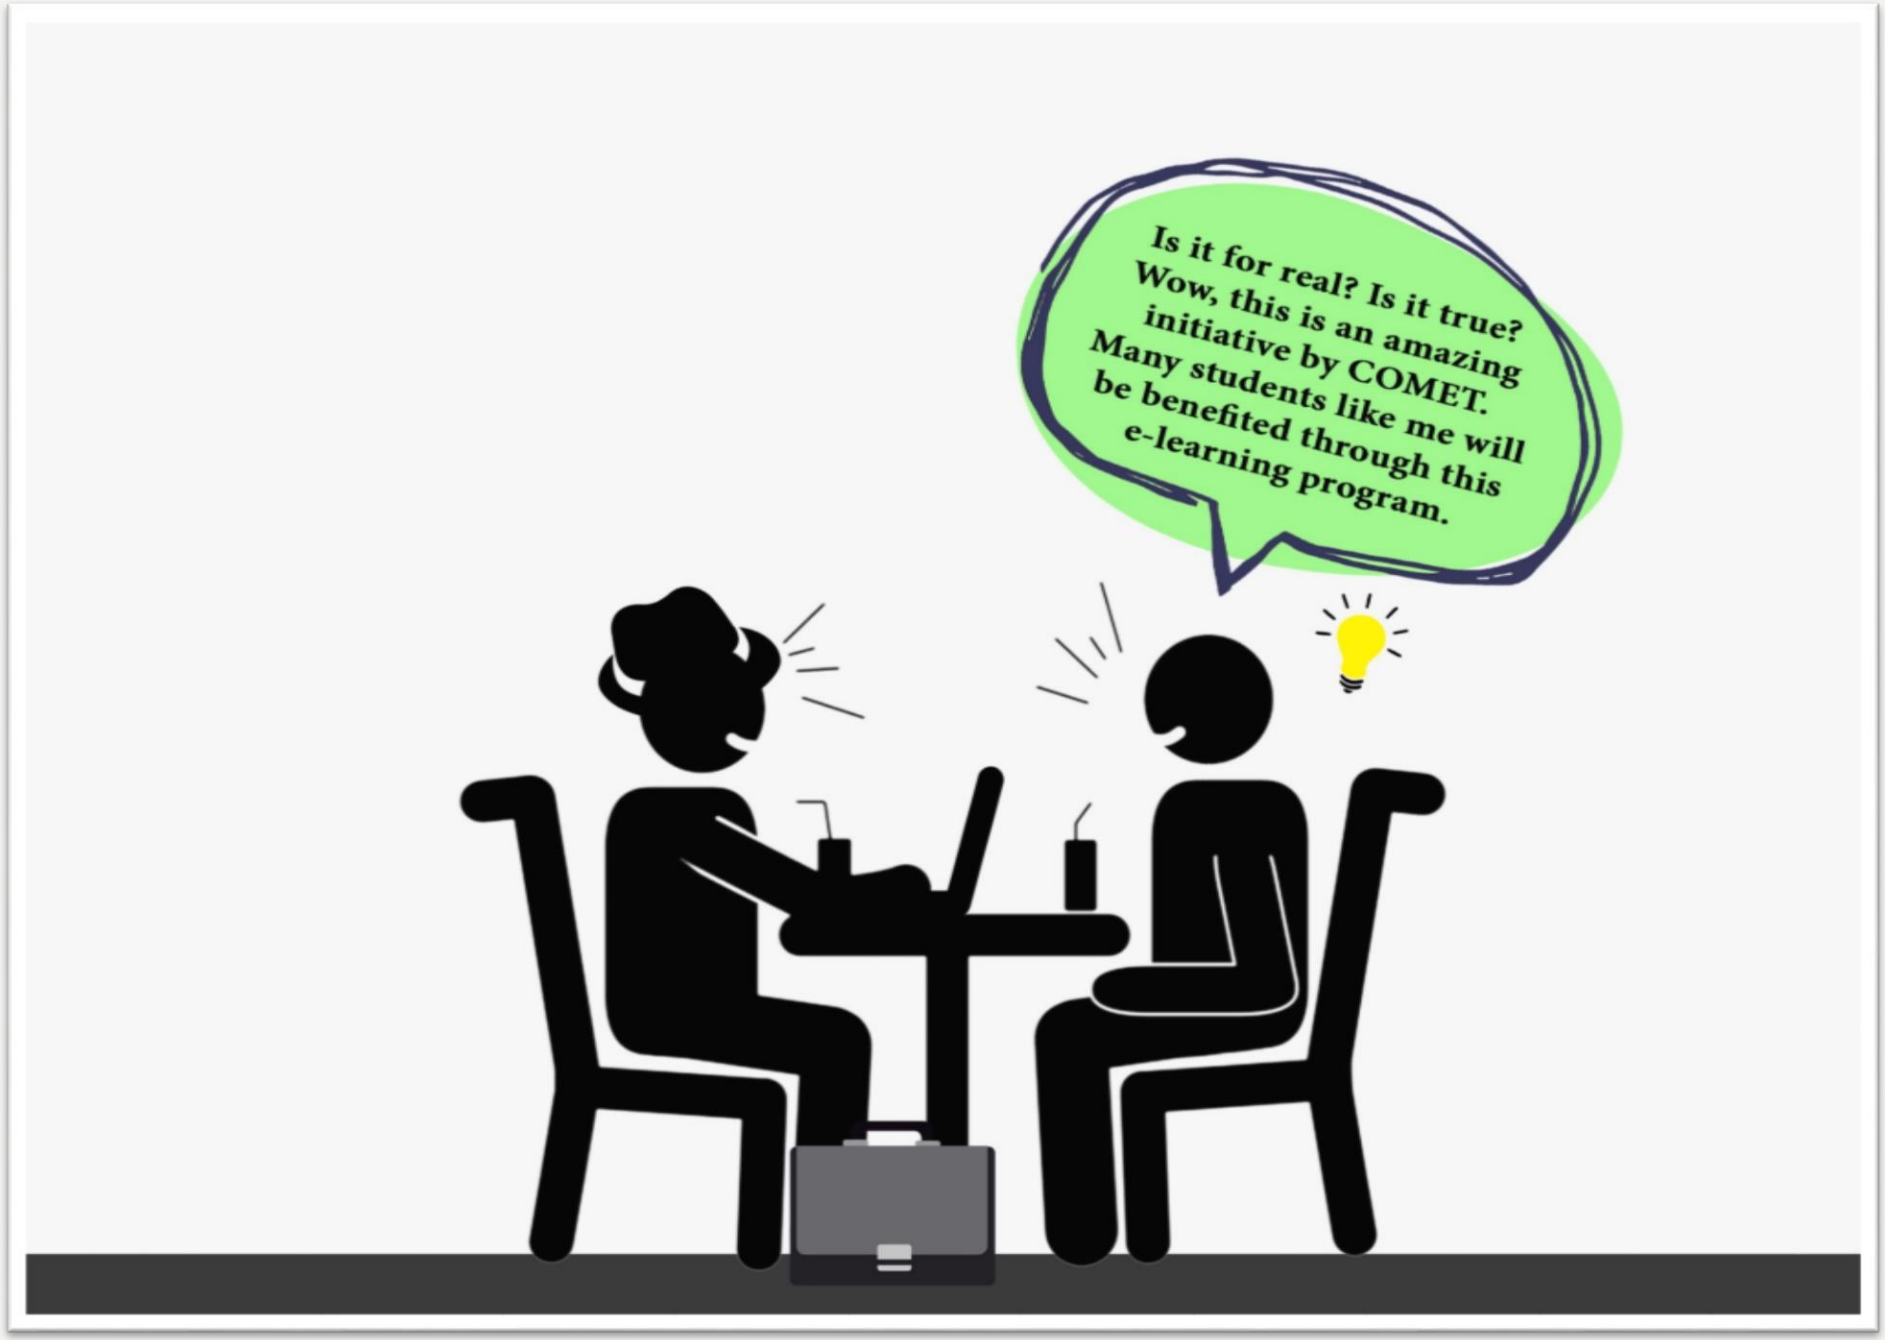
I completely agree with your point. In fact, most of us are ignoring the fact that investment on acquiring knowledge holds greater value & helps us to get a good secured job.

You know, I am really happy that I can help you by referring to COMET for better career prospects.

But right now, I could not afford money for training. Our family is not in a good economic condition during this pandemic.

I can understand your situation. COMET also has understood this as much as a friend can understand and they launched COMET New E-learning platform.
E-Learning

COMET E-learning platform will be a one-stop solution for all your needs. Course Prices are lowest ever as possible & affordable by almost all types of audiences. A single course price will be less than a one-time mobile recharge. Could you believe this?



Is it for real? Is it true? Wow, this is an amazing initiative by COMET. Many students like me will be benefited through this e-learning program.

Oh Yes, it will happen.
That is COMET's vision also.
They want to make as many
youngsters as possible employable
in different sectors of IT industry.
And I believe that will succeed in
fulfilling their vision.
